Section 7. Control System

INTRODUCTION

The control system governs the following functions:

- Starting
- Monitoring for fault conditions
- Instrumentation
- Stopping
- Engine speed governing (electronic governor sets only)

Thanks for the information on documents. The following manuals are onan manuals that are useful for finding and ordering parts for your MEP002A or MEP003A. Jump from 98 Vac to 124 Vac. They should also be > ~ 1,000,000 ohm between slipping rings and frame gen, with AC Reg Unplugged. Note that dje = the onan engine used in the MEP002A and DJF = the onan engine used in the MEP003A. Have you checked Hz? My cousin bought a camper, he asked me to take a look and is producing low voltage. So I wanted to find the manuals before removing the unit from the camper. Check the brushes for the wear, blocked, ect. Make sure it does not exhaust the gas with a load on it and do not disconnect the battery during the execution. If it has been sitting so long clean the sliding rings with Schotchbrite Pad or ~ \$ 250 AC Reg can die from the high brush to slide the contact resistance with a ring. Tell us what you find. Look in the manual. Is the RPM stable? Make sure the accelerator does not touch the screw inactive during the execution. Thanks. I checked the volts and were corrected, it only had to be performed for a while. Rings oxidize. I think Gen and RV have created for 6 years without being used. Thanks for your help. Ohm measure of the rotor, it should be 20.25-24.75 Ohm. I hope there is a potentiometer that I can adjust to get the tension back. The RPM is stable, I went there to control it and made the unit work. I am looking for the parties and service manuals for a Marchese 5000 onan generator. Model#5BGMFA26105G. No pots. With AC Reg Unplugged. I told him to let him run for a few hours and see if he stabilizes.
